

Meeting between 2 leads

Main agenda of meeting is to prepare code

They have to create a data base which include a id ,excel sheed which contain details

Data base is new com test

Person have a query about oracle in which he is getting the error in last line about oracle 10001.

Steps to create that the about site project and its API code

They have tp generalize excel sheet as in draft and API code in some 2 tab .

At last they create a dummy structure of a campegin API then review about 5that code then about site project.

They basically design the code in python .
